

Catalano respects the environment

Catalano, who has always been committed in safeguarding and preserving the environment, adopted a new waste traceability control system.

This system, which is one of the most advanced in Europe for “identification” of waste and for monitoring all the actors involved in disposal cycle, is really capable to fight the lawlessness and to simplify the control procedures.

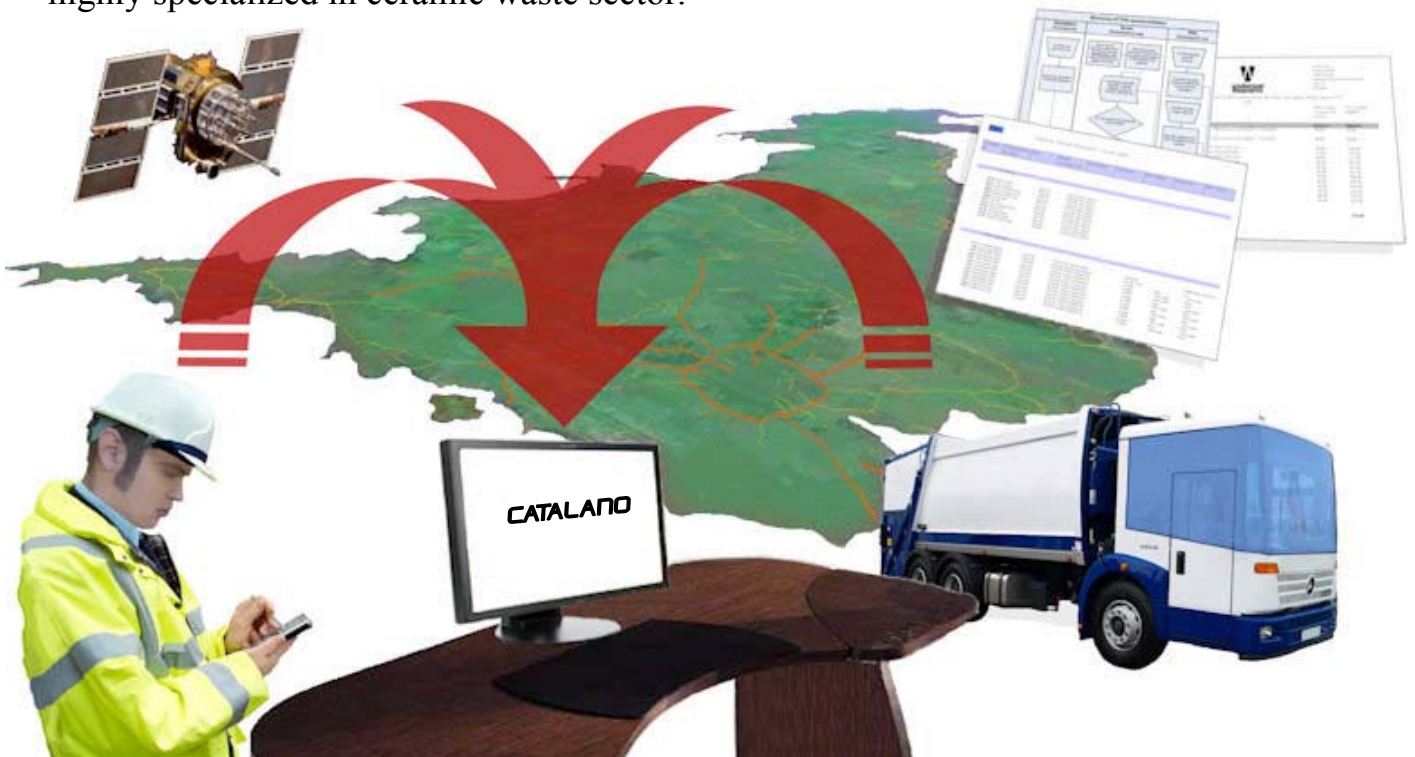

Through satellites and computer technology, the system follows and checks the route of the waste in real time, from the beginning to the final destination of the process.

The electronic devices allow to locate the waste and their transport at every stage of their trip; they represent a winning weapon to fight not only the illegal disposal, but also to defeat tax evasion and pollution. This is because it is easier to control and stop any irregularities in real time.

The project has been carried out in collaboration with the prestigious Bocconi University in Milan and with specialists skilled in disposal of industrial waste and highly specialized in ceramic waste sector.
